Cavalok offers a comprehensive range of cavity closers and associated new-build products for all cavity sizes, window types and construction methods. By fabricating closers into rigid frames a bricklaying template is created enabling simpler, faster construction, guaranteed sizes and many energy saving benefits.

Using Cavalok's insulated cavity closers helps create thermally efficient construction and prevents thermal bridging. All our closers meet the minimum ACD requirements of 0.45 W/m.k meaning that Cavalok closers can be relied upon for stringent Part L standards.

Our closers are uniquely manufactured from post-consumer recycled PVCu. Waste plastic, which might otherwise go to landfill, is re-processed into high quality, sustainable PVCu.

"Cavalok turns waste into energy saving products"
